Creating an interface for a WPF application is a lot easier today than it used to be. The most powerful and also the simplest way to take care of user interface design and development on the .Net platform is by using a WPF application. This is because WPF integrates all UI elements that are required into a single application. It is not that you need to create UI elements in different ways and in order to create different looking components. With WPF, it is

possible to use any components that are available on the .Net platform. For instance, let's say you wish
